

A Summary of Format Activities

Randall Ricklefs

Over the last few years the Consolidated Prediction Format (CPF) has been implemented at almost all the active SLR and LLR stations with the resultant deemphasis of TIV predictions. The LRO mission is in the midst of validating CPF files for the LRO spacecraft. In addition, the Consolidated laser Ranging Data format (CRD) has been partially implemented at MLRS and Stromlo, resulting in fine-tuning of the format. CRD test files are now available to any interested analysts. At least one analysis group (JCET) has made changes to allow "injecting" CRD-formatted data.
